

N-central third-party software patch list

The table below lists the third party patches available through Patch Manager.

The Windows agent communicates with the probe to determine what third-party applications can be updated. The agent obtains a list of applications from the probe and compares it to the software installed on a device. The agent determines what applications on a device need to be updated, and sends the list of available software updates needed on the device to N-able N-central to be approved by the administrator.

For more information on how Patch Manager provides third-party patching, see [Patching third-party software](#).

i N-able-central Patch Management supports the most current available patch and its associated operating system.

i Patching supports both 32-bit and 64-bit options from the vendor if available, unless otherwise noted.

Vendor	Application Name	Disables Pop-ups	Prevents internet updates
7-Zip	Seven-Zip		
Adobe	Acrobat X		
	Acrobat XI		
	Acrobat DC		
	Acrobat 2020
